The Brauer Project

Understanding Idempotents in Diagram Semigroups and Algebras

Igor Dolinka¹, James East², Athanasios Evangelou³, Des FitzGerald³, Nick Ham³, James Hyde⁴, **Nick Loughlin**⁵

> ¹Novi Sad ²Western Sydney ³Tasmania ⁴St Andrews ⁵Newcastle

> > July 25, 2015

The first paper from this project is available at **arXiv:1408.2021**, and in the Journal of Combinatorial Theory, Series A (JCTA).

The second has appeared in preprint form, at **arXiv:1507.04838**. A third is "in the works."

This is joint work with Igor Dolinka (Novi Sad), James East (Western Sydney), Athanasios Evangelou, Des FitzGerald and Nick Ham (Tasmania) and James Hyde (St Andrews). [**HEHFELD**]

Idempotents and Irreducibility

Lemma (HEHFELD, I)

An irreducible partition $\alpha \in P_n$ is idempotent precisely if $rank(\alpha) \leq 1$.

Lemma (HEHFELD, I)

A partition is idempotent iff each restriction to a kernel class is.

Idempotents and Irreducibility

Lemma (HEHFELD, I)

An irreducible partition $\alpha \in P_n$ is idempotent precisely if $rank(\alpha) \leq 1$.

Lemma (HEHFELD, I)

A partition is idempotent iff each restriction to a kernel class is.

Corollary (HEHFELD, I)

A partition is idempotent iff each kernel class houses at most one transverse component.

Counting Idempotents using a Partition Trick

Can understand and very quickly enumerate idempotents in \mathcal{P}_n , $\mathcal{B}r_n$ and $\mathcal{PB}r_n$.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?
Counting Idempotents using a Partition Trick

Can understand and very quickly enumerate idempotents in \mathcal{P}_n , $\mathcal{B}r_n$ and $\mathcal{PB}r_n$.

Observation

The number p(n) of partitions on n points is equal to

$$p(0) = 1,$$
 $p(n) = \sum_{i=1}^{n} i \cdot p(n-i)$
