HJB equation:

## HJB equation:

$$\begin{aligned} \frac{\partial u}{\partial t}(t,x) &+ \inf_{a \in \Lambda} (L^a u(t,x) + f(x,a)) = 0, \\ u(T,x) &= h(x), \ x \in H, \end{aligned}$$

$$\begin{aligned} \text{(6)} \\ L^a v(x) &= \langle Ax, Dv(x) \rangle + \langle g(x,a), Dv(x) \rangle \\ &+ \int_U \left[ v(x + G(x,a)z) - v(x) - \langle Dv(x), G(x,a)z \rangle \right] \nu(dz) \\ \text{(7)} \\ L^a v(x) &= \langle Ax, Dv(x) \rangle + L_0^a v(x), \end{aligned}$$

HJB equation:

(8) 
$$\frac{\partial u}{\partial t}(t,x) + \langle Ax, Du(t,x) \rangle + \inf_{a \in \Lambda} (L_0^a u(t,x) + f(x,a)) = 0,$$
$$u(T,x) = h(x).$$

◆□ > ◆□ > ◆三 > ◆三 > ○ = ○ ○ ○ ○

Meta theorem:

## Meta theorem:

*V* is the unique solution to (6) and the minimizer:  $\hat{a}(t,x), t \in [0, T], x \in H$ ,

$$\inf_{a \in \Lambda} (L^a V(t, x) + f(x, a)) = L^{\hat{a}(t, x)} V(t, x) + f(x, \hat{a}(t, x))$$

is the optimal feedback strategy.

- 同下 - 三下 - 三日

Meta theorem:

#### Process $\widehat{X}$ :

$$\begin{split} d\widehat{X}(s) &= \left[A\widehat{X}(s) + g(\widehat{X}(s), \hat{a}(s, \widehat{X}(s)))\right] ds \\ &+ G(\widehat{X}(s-), \hat{a}(s, \widehat{X}(s-))) dZ(s), \\ \widehat{X}(t) &= x \end{split}$$

is an optimal one.

└─ Test functions

## Test functions

$$L^{a}v(x) = \langle Ax, Dv(x) \rangle + \langle g(x, a), Dv(x) \rangle$$
$$+ \int_{U} \left[ v(x + G(x, a)z) - v(x) - \langle Dv(x), G(x, a)z \rangle \right] \nu(dz)$$

(10) 
$$\frac{\partial u}{\partial t}(t,x) + \inf_{a \in \Lambda} \left[ L^a u(t,x) + f(x,a) \right] = 0,$$
$$u(T,x) = h(x), \ t \in [0,T], \ x \in H.$$

イロト イポト イヨト イヨト

Viscosity solutions

└─ Test functions

## Test functions

$$L^{a}v(x) = \langle Ax, Dv(x) \rangle + \langle g(x, a), Dv(x) \rangle$$
$$+ \int_{U} \left[ v(x + G(x, a)z) - v(x) - \langle Dv(x), G(x, a)z \rangle \right] \nu(dz)$$

(10) 
$$\frac{\partial u}{\partial t}(t,x) + \inf_{a \in \Lambda} \left[ L^a u(t,x) + f(x,a) \right] = 0,$$
$$u(T,x) = h(x), \ t \in [0,T], \ x \in H.$$

 $\varphi(t,x), t \in [0, T], x \in H$  is a **test function** if  $\varphi$  is continuous on  $(0, T) \times H$  and  $\varphi_t, D\varphi, A^*D\varphi D^2\varphi$  are uniformly continuous on  $(\varepsilon, T - \varepsilon) \times H$ for every  $\varepsilon > 0$  and locally bounded. Viscosity solutions

Subsolution

#### Subsolution

A continuous function  $u: (0, T] \times H \to R$  is a viscosity subsolution to (10) if  $u(T, x) \leq h(x)$  and whenever  $u - \varphi$  has a global maximum at a point (t, x) for a test function  $\varphi$  then

(11) 
$$\frac{\partial \varphi}{\partial t}(t,x) + \inf_{a \in \Lambda} \left[ L^a \varphi(t,x) + f(x,a) \right] \ge 0.$$

< 同 > < 三 > < 三 >

Viscosity solutions

Supersolution and viscosity solution

## Supersolution and viscosity solution

A continuous function  $u: (0, T] \times H \to R$  is a viscosity supersolution to (10) if  $u(T, x) \ge h(x)$  and whenever  $u - \varphi$  has a global minimum at a point (t, x) for a test function  $\varphi$  then

(12) 
$$\frac{\partial \varphi}{\partial t}(t,x) + \inf_{a \in \Lambda} \left[ L^a \varphi(t,x) + f(x,a) \right] \leq 0.$$

A viscosity solution to (10) is a function which is both subsolution and supersolution.

Uniqueness of viscosity solutions

 $\square B$ -continuity

Let *B*-positive definite, bounded operator on *H* such that for some  $c_0$ :

$$\langle (-A^*B + c_0B)x, x \rangle \ge 0$$
, for all  $x \in B$ .

Define

$$||x||_B = ||B^{1/2}x|| = \langle Bx, x \rangle^{1/2},$$

*u* is *B*-continuous on  $(0, T] \times H$  if whenever  $t_n \to t$ ,  $Bx_n \to Bx$  and  $x_n$  bounded,  $u(t_n, x_n) \to u(t, x)$ .

Uniqueness of viscosity solutions

Uniqueness

## Uniqueness

(A3)' 
$$||g(x,a) - g(y,a)|| + ||G(x,a) - G(y,a)|| \le C ||x - y||_B$$
  
(A5)'  $|f(x,a) - f(y,a)| + ||h(x) - h(y)| \le \sigma(||x - y||_B)$   
*B*-test functions. *B*-viscosity solution is *B*-continuous.

イロト イヨト イヨト イヨト

Uniqueness of viscosity solutions

Uniqueness

#### *B*-test functions

$$\psi = \varphi + \delta(t, x)h(||x||),$$

(i) φ<sub>t</sub>, Dφ, D<sup>2</sup>φ, A\*Dφ, δ<sub>t</sub>, Dδ, D<sup>2</sup>δ, A\*Dδ are uniformly continuous on (ε, T - ε) × H for every ε > 0, δ ≥ 0 and is bounded, φ is B-lower semicontinuous, δ is B-continuous.
(ii) h is even, h', h" are uniformly continuous on ℝ, h'(r) ≥ 0 for r ∈ (0, +∞).

< 同 > < 三 > < 三 >

Uniqueness of viscosity solutions

Uniqueness

## *B*-test functions

$$\psi = \varphi + \delta(t, x) h(\|x\|),$$

(i) φ<sub>t</sub>, Dφ, D<sup>2</sup>φ, A\*Dφ, δ<sub>t</sub>, Dδ, D<sup>2</sup>δ, A\*Dδ are uniformly continuous on (ε, T - ε) × H for every ε > 0, δ ≥ 0 and is bounded, φ is B-lower semicontinuous, δ is B-continuous.
(ii) h is even, h', h" are uniformly continuous on ℝ, h'(r) ≥ 0 for r ∈ (0, +∞).

Viscosity subsolutions are requiered to be B- upper semicontinous.

Viscosity supersolutions are required to be *B*- lower semicontinous

Uniqueness of viscosity solutions

Uniqueness

#### Theorem 2

## Under (A3)', (A4), (A5)', (A6) equation (10) has unique *B*-viscosity solution. It is identical with the value function.

### Proposition 1

Let  $A_n = nA(nI + A)^{-1}$ , be the Yosida approximations of A. If a predictable process  $\phi(r)$ ,  $r \in [t, T]$  is such that

$$\mathbb{E}\int_t^T \|\phi(r)\|_{\mathcal{H}}^2 \, dr < +\infty,$$

then the stochastic convolution

$$\psi(s) = \int_t^s \int_U e^{(s-r)A} \phi(r, u) \widehat{\pi}(dr, du), \quad t \le s \le T$$

has a cádlág modification and  
(16)  
$$\lim_{n \to \infty} \mathbb{E} \sup_{t \le s \le T} \left\| \int_t^s \int_U (e^{(s-r)A_n} - e^{(s-r)A}) \phi(r, u) \widehat{\pi}(dr, du) \right\|^2 = 0.$$

— Main tools

### Proposition 2

Let  $(\Omega_i, \mathcal{F}_i, \mathcal{F}_s^{i,t}, \mathbb{P}_i, L_i)$ , i = 1, 2, be two reference probability spaces and  $\pi_i$ , i = 1, 2, be the Poisson random measures for  $L_i$ , i = 1, 2. and  $a_i$  strategies. Let  $\mathcal{L}_{\mathbb{P}_1}(a_1(\cdot), L_1(\cdot)) = \mathcal{L}_{\mathbb{P}_2}(a_2(\cdot), L_2(\cdot))$  on some subset  $D \subset [0, T]$ of full measure. Denote by  $X_i(\cdot)$  the unique mild solutions of the corresponding controlled equations with  $a(\cdot) = a_i(\cdot)i = 1, 2$ . Then  $\mathcal{L}_{\mathbb{P}_1}(X_1(\cdot), a_1(\cdot)) = \mathcal{L}_{\mathbb{P}_2}(X_2(\cdot), a_2(\cdot))$  on D.
